

CLAIMS

1. A wiring harness slack absorbing device comprising:

a case for receiving a wiring harness having an inlet and an outlet for the wiring harness, said inlet being perpendicular to the outlet;

5 an urging member for urging the wiring harness toward an inside of the case; and

a harness roller around which the wiring harness being rolled, said harness roller reciprocally moving under acting force of the urging member,

10 wherein a space for receiving a folded part of the wiring harness is provided between the case and the urging member,

wherein the folded part of the wiring harness is led into the case through the inlet and received in the space.

2. The wiring harness slack absorbing device as claimed in claim 1,

15 wherein a center axis of the urging member is displaced from a center plane of said harness roller in a direction of thickness of the device for providing a large space for receiving the folded part of the wiring harness.
